

Problem Statement ID - 26043

Problem Statement Title - A digital platform to crowdsource societal challenges and facilitate collaborative problem solving through universities and industry partnerships.

Theme - Smart Education

PS Category - Software

Team ID -

Team Name - HiveMind

A COLLABORATIVE PLATFORM CONNECTING CITIZENS, UNIVERSITIES, GOVERNMENT, AND INDUSTRY TO SOLVE SOCIETAL CHALLENGES THROUGH INNOVATION

PROBLEM OVERVIEW

- Local societal challenges often remain unresolved due to fragmented reporting and collaboration.
- Citizens lack a centralized platform to submit and track community problems.
- Universities and students struggle to access real-world, demand-driven problem statements.
- Industry expertise, funding, mentorship, and technology remain underutilized for social innovation.
- Government lacks unified data to monitor challenges, solutions, collaboration, and social impact.

PROBLEM SOLUTION

- Centralized platform for citizens to report and track societal challenges.
- AI-based classification, prioritization, and duplicate detection of submitted problems.
- Intelligent matching of challenges with suitable universities and expert teams.
- Industry collaboration for mentorship, funding, prototyping, and technology deployment.
- End-to-end project tracking from problem validation to solution implementation.
- Real-time dashboards to measure projects, innovation outcomes, and community impact.

HIERARCHICAL DIAGRAM

METHODOLOGY

FLOW CHART

ANALYSIS OF THE FEASIBILITY OF THE IDEA

1. TECHNICALLY FEASIBLE:

The platform can be developed using proven technologies such as AI/ML, cloud computing, mobile applications, secure databases, APIs, and geospatial services, making implementation practical and reliable.

2. SCALABLE ARCHITECTURE:

A modular and cloud-based architecture allows the platform to gradually expand from a pilot in selected districts to universities, industries, and communities across the entire state.

3. EASY INTEGRATION:

The platform can integrate with existing government portals, university systems, authentication services, and communication platforms through APIs, reducing duplication and simplifying information sharing.

4. COST-EFFECTIVE:

Using open-source frameworks, cloud infrastructure, and existing institutional resources can significantly reduce development and maintenance costs while supporting large-scale deployment.

5. SUSTAINABLE & IMPACT-DRIVEN:

Long-term sustainability can be supported through government initiatives, CSR funding, research grants, industry partnerships, and innovation programs while continuously measuring social and economic impact.

POTENTIAL CHALLENGES AND RISKS

Data Privacy & Security

Citizen information, location data, photographs, and documents may contain sensitive information, creating privacy and cybersecurity risks.

Coordination & Implementation

Managing communication, responsibilities, approvals, funding, and timelines across multiple stakeholders can be challenging.

AI Accuracy & Bias

AI-based classification, prioritization, and university matching may produce incorrect or biased recommendations.

Low User Adoption

Citizens, universities, and industries may initially hesitate to use a new platform due to lack of awareness or digital literacy.

STRATEGIES FOR OVERCOMING THESE CHALLENGES

Strong Security Measure

Implement encryption, role-based access, secure authentication, consent management, regular security audits, and compliance with applicable data-protection requirements.

Awareness & User Support

Conduct workshops, campaigns, university programs, and local outreach while providing multilingual interfaces and simple submission processes.

Human-in-the-Loop AI

Use AI primarily for recommendations and automation, with experts and administrators validating important decisions and continuously improving the models.

Clear Governance & Workflow

Define roles, approvals, SLAs, milestones, notifications, and dedicated coordinators to ensure smooth and timely execution.

IMPACT AND BENEFITS

UNIQUE FEATURES:

Role-Based Ownership

Clearly assign responsibilities and decision-making authority.

Smart Approval Workflow

Automate approvals and route requests to the right stakeholders.

SLA Monitoring

Track deadlines and send alerts before SLAs are breached.

Milestone & Progress Tracking

Monitor key milestones, dependencies, and implementation status.

Dedicated Coordination Hub

Provide coordinators with a centralized space for communication, updates, and issue resolution.

IMPACTS

Faster Decision-Making

Reduces delays through clear ownership and approval workflows.

Improved Accountability

Ensures every task has a defined owner and deadline.

Greater Transparency

Provides visibility into milestones, progress, and responsibilities.

Fewer Delays & Bottlenecks

SLA tracking and timely notifications help resolve issues early.

Smoother Collaboration

Coordinated workflows improve communication across teams.

BENEFITS

Increased Efficiency

Streamlines processes and reduces unnecessary steps.

Better Time Management

Keeps teams focused on priorities and deadlines.

Reduced Operational Risk

Clear processes minimize missed approvals and responsibilities.

Enhanced Team Coordination

Centralized workflows make collaboration easier.

More Consistent Execution

Standardized processes support reliable and timely implementation.
